

Company Introduction

Carmel Corrosion Systems Inc. develops and produces wrap-around corrosion protection products, specifically designed for highly corrosive marine environments. The pre-fitted wraps are specially designed, for easy and quick on-site installation. Wraps can be used for splash zone, offshore or deep-water locations, on piles, risers, sub-sea pipelines dolphins, deep-water structures etc.

CCS offers superior protection for the client's high-end property. While other market products demands extensive work force hours for installation, CCS offers a pre- fab, one-piece product, ready for quick installation on site. The result is a dramatically shorter installation time and better performance results of a homorganic factory manufactured, quality controlled product.

CCS various products are designed for specific needs and specific designs. **Heavy Duty 4** ply wraps, are recommended for most regular uses. **Extreme 6** ply, targeted at extreme conditions, better resistance to high waves, floating debris or ice floats. **H Wrap**, presents a solution for H piles and other irregular shaped piles and structures.

Our products act as a passive as well as active barrier to the corrosive environment, depriving the structure surface from coming in contact with oxygenated seawater. The active protection factors being the corrosion inhibiting agents within the wrap, which arrest and deter further corrosion to the structure.

CCS is a US based company. Our wraps are manufactured in our facility located in Vermont USA. Our quality assurance and control procedures, fully comply with U.S and International Standards (ISO 9001: 2008 certified).
